Accuracy Defined Through Design

General Directions for Use:

Simply slip your d-loop into the jaw slot and push in on the cocking lever. This will close your jaw on the loop and lock it. Draw and anchor while keeping your thumb or 3rd finger away from the trigger. After anchoring and acquiring your target gently rest your thumb or 3rd finger on the trigger. Applying pressure will fire the release.

Trigger Adjustment:

To adjust the trigger travel, turn the set screw counterclockwise for more travel and clockwise for less travel. After adjusting the set screw, test the release by hooking a string to a stationary object and pull-test and fire the release to make sure it is safe to hold drawing weight. Caution: if the set screw is adjusted for insufficient travel, the release may fire prematurely and possibly cause damage or injury. *Travel refers to the degree the trigger will move prior to the release firing.

Converting From Thumb To 3rd Finger Trigger:

Remove the knurled knob from the thumb trigger. Insert the 5/40 x 1/2 socket head screw through the hole in the bottom of the attachment arm, then bring the knob down on top of the screw to re-attach. Tighten down the screw and this will give you a pulling post to assist when drawing in 3rd finger trigger mode.
